

Features

Frequency 100 MHz
 HCMOS output
 Analog compensation for low noise
 5.0 V supply

Picture of Part

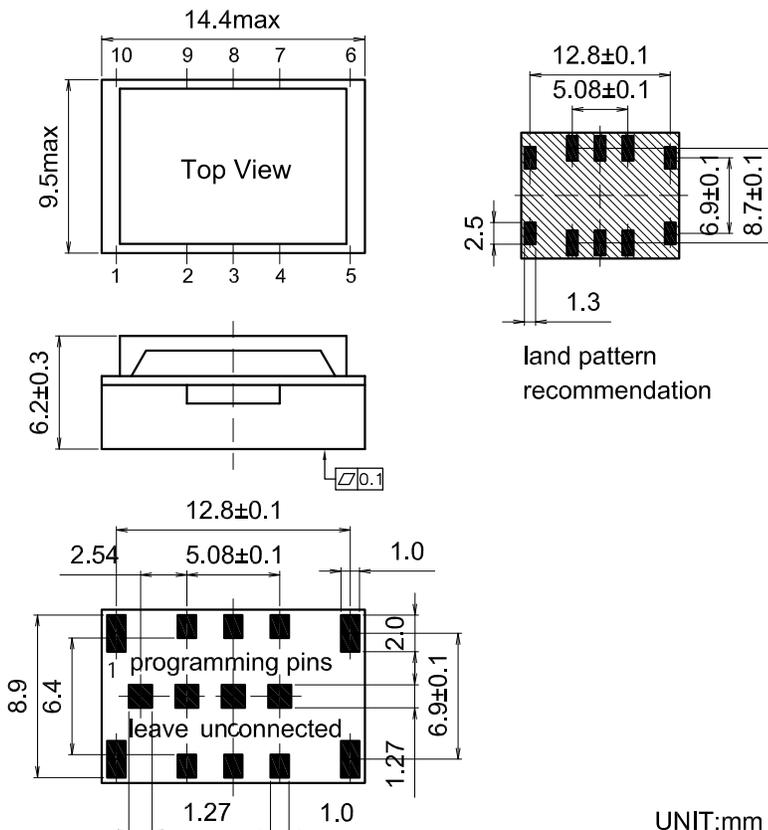

Typical Applications

Land Mobile and portable radio
 Test and Measurement
 Wireless Communications
 Low Noise Synthesizer Reference

Description

The TCXO914VHS represents a 100% analog compensation design whereby the compensating voltage is a continuous function. This allows for the Frequency versus temperature curve of the oscillator to behave without sudden frequency jumps that degrade phase noise in the customer application.
